

Boost! – Introduction

Commercial Space Transportation Services

THE 1ST SPACE TRANSPORTATION ECOSYSTEM CONFERENCE IN GERMANY

Dr. Thilo Kranz - ESA

27 JUNE 2024 | MUNICH

Space is open for Business – Commercial Space Transportation Services

Europe's level of space ambition

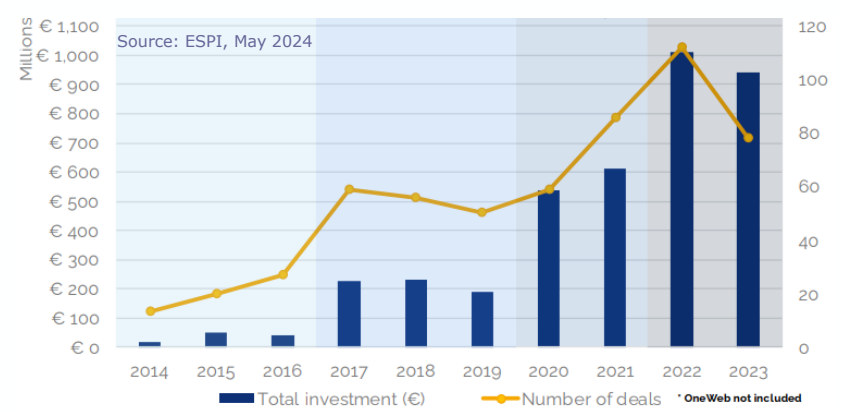

Commercialisation in space transport

Service Primes

+ consortium partners ... and many more

New European commercial service providers

European space start-ups Transactions & investments

Boost! 1 – Commercial Space Transportation Services

ESA support to privately-led commercial space transportation service developments; **63.4M€** already committed in 2020-2024

45 M€
for industrial
co-funding
2023 - 2026

Boost! 2 – Support to Member States national objectives

ESA assistance in implementing national space transportation objectives and capabilities – **no industrial contracts are placed**

7 M€
for ESA
assistance
2023 - 2026

Boost! 3 – Space Transportation Services Procurement

Implementing European Flight Ticket Initiative with the European Commission, co-funding launch services for IOD/IOV satellites

30 M€
launch service
co-funding
2024 - 2026

Boost! supports delivery of commercialisation services in space transportation sector

We are looking for adequately mature private ‘for-profit’ prime companies, potentially involving consortium partners, developing or operating services to be sold to end customers

Boost! 1 support is provided at service-level

Who can submit service proposals?

⇒ **Industrial prime companies developing or operating a commercial space transportation service**

Note: Industrial consortium partners should be included in the service proposal from the prime company

What is the service-level approach?

Services shall be understood as covering all aspects needed for offering them to end customers and without requiring the customers to procure any additional essential service elements.

Characteristics of eligible services

- Privately-proposed and privately-led service developments and operations
- Services to-space, in-space, from-space & self-standing support services
- Not driven by institutional needs, no guaranteed institutional market

Note: Boost! is **NOT an R&D programme** for developing concepts, technologies, products or sub-systems

Launch Services

Boost! supports European launch service prime companies and their consortia to deploy new European access to space services for light satellites

In-Orbit & Return Transport Services

Boost! supports European prime companies and their consortia to offer new last-mile orbital deployment services, new orbital transfer vehicle-based services, and orbital return service capabilities

... More to come!

Boost!
Call for Proposals permanently open for Service Proposal submission!

Boost! 1 – How we support Economic Operators

New service-level approach, with ESA

- Acting as partner, not as customer
- Leaving full project authority and full responsibility to service providers
- Providing know-how and expertise and enabling access to test facilities
- Co-funding, facilitating private funding streams, networking, and more

Isar aerospace

Welcoming customers of Spectrum's 1st and 2nd flight

CSTS Customer Day at Isar Aerospace
